### ***About CTRM Testing Laboratory***

Our laboratory offers full range of testing of materials to support our customers with information, quality control, failure investigation and customized in-house method. We have 18 years of experience in composites materials and processes which lead us to become no 1 leadership in ASTM, ISO, BS standard in composites material testing

### ***Quality Assurance***

Our quality assurance program is in compliance with such prestigious industry quality standard as Nadcap and accredited to MS ISO/IEC 17025 for mechanical and chemical testing.

### ***Our Services***

#### ***Sample preparation***

Composite fabrication using autoclave. Our laboratory is capable to manufacture composites panel using autoclave.

#### ***Specimen Machining***

All type of mechanical testing are prepared by our machining facility with latest computerized numerical control (CNC) equipment, diamond cutter to produce high quality, economical test specimens specialized in composites and other type of materials. The machining is performed according to international standard such as ASTM D3039, ASTM D638, ASTM D7078, ASTM E8 and related customer specification.

#### ***Testing***

Mechanical test  
Physical & Chemical test  
Thermo-Physical test
